

JoySpinner - Signaller - TapGear - Remote Control

RB Systems is a world leader developing unique and sophisticated micro-computer devices that enable the disabled driver to retain userfriendly, safe control over the vehicle's electrical functions from almost any location.

JoySpinner

Ergonomically designed and compact for comfortable use, this 12 function RF remote control knob with a quick release mounting bracket provides intuitive and safe activation from a 4 way joystick and 2 push buttons.

Signaller

CanBus or Relay connection secondary driving control system. Up to 12 electrical driving functions from one easy, quick installation. The wired keypad is usually attached to the hand control.

Hybrid system with many operational controlled inputs: Illuminated keyboard and/or RF JoySpinner and/or RF remote-control and/or Standard push bump buttons.

TapGear

TapGear is a Gear Shift Control installed into any automatic transmission. It provides easy activation of all gear lever positions - including Tiptronic control and Overdrive, from a simple press of a button. Using precise servomotor actuator movement and CanBus digital connection, reliable gear positioning is assured.

Vehicle Access Remote Control

Open and close Doors, raise and lower Hosts and chair Elevators automatically from anywhere. Up to 5x Functions - universal RF remote control.

Using CunBus protocol our products are smaller, easier to install and provide conflict-free communication with the modern electrical systems of today's vehicle.
