

Wireless Portable Doorbell with strobe light

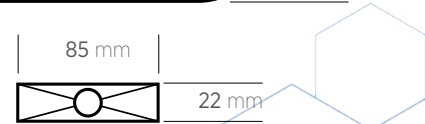

A portable doorbell designed for the hearing impaired, with strobe lighting and a range of alternative chime melodies.

When the doorbell is activated, the chime melody is accompanied by several bright flashes from the receiver's built in strobelight, helping to alert a hearing impaired person that someone is at the door. With two volume levels available, the chime melody can be set to one of seven different sounds. With more than one Push Button in use at different entrances, a different melody can be associated with each Push Button for easy identification.

The portable door chime can be taken from room to room, or even used outdoors, and will work up to 45 metres from the transmitter button. The chime can be kept on your person or hung on a mounting spot with the included carry strap. Four C sized batteries are included.

The Push Button doorbell is easy to mount (with screws or foam mounting tape) and has variable security codes to prevent interference. One A23 (12 volt) sized battery is included.
